

Alliance Partner Brief

The CSC and RSA Alliance

Secure Information Management to Accelerate Your Business

The Big Picture

RSA has joined forces with CSC, combining the premier provider of security solutions for business acceleration with the single largest independent IT services company, to protect what should be your most important company asset – information. Together, we help enterprises reduce risk through protecting the integrity and confidentiality of that information. Combining best-in-class services and technology, our unique, integrated solutions turn information – its use, access and storage – into competitive advantage.

Today's enterprise faces orchestrated, intelligent threats that must be handled by an integrated and fully coordinated security approach, extending throughout and across the business. Compliance with new regulations is an adaptive, integrative process, thoroughly ingrained into daily operations. And decision-makers are used to assessing operational risk levels continually, using current and in-depth intelligence.

Our clients are forced to understand and balance the risks to their business and translate those risks to enterprise policy and priorities, competing for scarce resources to provide protection that is measurable, compliant and improves performance.

How Can Businesses Turn Information Use, Storage and Access into Advantage?

RSA and CSC deliver integrated solutions to help businesses turn information – its use, access and storage – into competitive advantage. Our solutions solve complex compliance and security challenges by applying leading technology and integrated services to help clients manage risk and optimize operations across the business.

Our approach takes a business-focused view to prioritize risk and apply the appropriate protection to ensure your information is secure across its entire lifecycle. We begin with a baseline of existing security measures and requirements to establish a solution and program designed to improve security and manage risk specifically for your business. In addition, CSC has a number of short-term assessments available to identify a snapshot of existing vulnerabilities and compliance challenges. CSC's lead information risk managers coordinate all security service delivery for clients and are dedicated to managing the security program. Together, RSA and CSC combine the business expertise of these lead information risk managers with specific service offerings powered by RSA's best-in-class technology in a cohesive, enterprise-wide security program. We offer industry-leading solutions in identity assurance and access control, compliance and security information management. Our solutions comprise four key areas:

- Assessing and Managing Risk
- Managing Access
- Securing the Infrastructure
- Achieving and Maintaining Compliance

A business-focused view to prioritize risk and apply the appropriate protection to ensure that information is secure across its entire lifecycle

Why Manage Security with RSA?

After a rigorous selection process and testing of various solutions, CSC chose RSA for its proven ability to meet clients' business requirements including:

- **Scalability:** RSA can support an indefinite number of devices and events per second.
- **Extensibility:** The RSA solution can connect a wide range of devices and a wide range of server types.
- **Predictability:** The RSA solution uses a proprietary database technology suitable to a large volume of records being inserted as occurs in security monitoring.
- **Agent-less operation:** The RSA solution does not use agent software on the target devices and servers. Agents are disruptive to deploy and maintain; they also take host cycles and represent a security risk in their own right.
- **Ease of implementation:** The RSA solution takes less effort to set up, especially with respect to the log database.

Dedicated Solutions

Protect access to information. Assuring the identities of users requesting access is a core element of any security initiative. CSC's Managed Authentication Service leverages RSA SecurID® authentication, a time-synchronous, two-factor authentication solution that provides strong protection against unauthorized access. Today, CSC's service supports users in 57 countries on three continents, providing protection on many different platforms and technologies ranging from mainframe to desktop and from remote access services to SAP.

Simplify audit and compliance efforts by knowing who has accessed, changed or updated systems across a complex and dynamic environment. CSC's Audit Log Assurance

service ensures all vital network and system logs are centrally stored, correlated and analyzed by our team of security experts to lower the total cost of ownership and increase our clients' ability to track infrastructure resources across the enterprise. RSA enVision® technology helps CSC teams locate, analyze and simply and effectively analyze log data – and report on any impacts to business, saving precious time and improving our ability to manage risk with our clients.

Fortify your environment, reduce exposure to threats and attain security intelligence to continuously improve security via a true, enterprise-wide intrusion prevention lifecycle. Integrated Security Information and Event Management from CSC builds upon RSA's enVision technology and CSC's Audit Log Assurance solution to optimize security management to deliver a greater return on security investments and demonstrate provable security to management and auditors.

ACHIEVING COMPETITIVE ADVANTAGE WITH CSC AND RSA

BUSINESS CHALLENGES	BENEFITS OF SECURE INFORMATION MANAGEMENT
Information and data volumes bog down back-end systems	Faster, more agile ability to respond to business-critical needs or opportunities
Enhance Security & Mitigate Risk	<ul style="list-style-type: none"> - Increase security effectiveness with baselined alerting and on-demand analysis of network activity for security breaches - Real-time as well as historical security and compliance analysis and a powerful reporting and alerting solution - Improved ability to respond cost-effectively to potential security and organizational risks - Central log archive that stores information for defined periods - Visibility through access to real-time events, correlation of events across device types and alerts against baseline anomalies and unusual privileged user activity
Simplify Compliance Inability to determine who, what, when and where information is accessed: <ul style="list-style-type: none"> - preventing compliance - promoting possible data loss - creating possible security breach/incident 	<ul style="list-style-type: none"> - Protect intellectual property through verification of security policies and privileged user access - Ease passing of audits through establishment of sufficient audit trails to address threats or problems - Improve shareholder and business partner (supplier, etc.) confidence by meeting regulatory requirements and satisfying reporting/monitoring requirements under government and industry compliance regulations such as GLBA, Sarbanes-Oxley, HIPAA and PCI
Optimize IT and Network Operations	<ul style="list-style-type: none"> - Increase efficiency - Optimize performance - Centralize management – aggregation and analysis of events from many systems including network, security, host, application and storage layers across the enterprise, which lowers total cost of ownership and increases clients' ability to track infrastructure resources
Proceeding with Digital Investigation in Response to an Incident	<ul style="list-style-type: none"> - Enables evidence collection in response to an incident by enabling the digital chain of custody with unaltered log data for data retention and forensic requirements

Find out how you can benefit today from CSC and RSA's unwavering focus on protecting the integrity and confidentiality of your information to improve competitive advantage.

Our partnership brings together the best of technology for security event, threat and log management, and access control along with world-class service excellence and expertise to ensure your operations are effectively and securely managed. Find out more about how we deliver benefits you can profit from, such as:

- Improved visibility and access control across your operating environment, wherever information can be found
- Increased operational control to ease audit and compliance concerns
- Robust infrastructure security from the board room to the data center to manage both operational risk and security operations
- Solutions that scale from the most complex global operating environment to point solutions for your national business or regional office
- Improved time-to-market and fewer disruptions or less down-time by leveraging our proven solution expertise and security skill sets to augment in-house personnel
- Higher levels of compliance while lowering the overall cost of deploying these integrated services

Together, our team of experts will strengthen your ability to manage risk and secure information. Find out how we can help you today.

About CSC

CSC is a global leader in providing technology enabled business solutions and services. Our purpose is to deliver innovative business and technology solutions that help our commercial and government customers worldwide achieve what they want most – results.

About RSA

RSA, The Security Division of EMC is the premier provider of security solutions for business acceleration. We help the world's leading organizations succeed by solving their most complex and sensitive security challenges.

Bringing together the best technologies for security event, threat and log management, and access control, along with world-class service excellence
