

# You're Missing Out: Activate ID Plus Cloud

Your RSA® ID Plus deployment is already bringing critical identity and access management (IAM) capabilities to your on-premises users. But you can get even more value out of ID Plus by deploying it in cloud and hybrid environments.

**Your ID Plus license enables you to secure all users, devices, and entitlements in cloud, hybrid, and on-premises environments.** The solution defends against sophisticated cyber threats with a Secure by Design, NIST 2.0-compliant platform that surpasses users' expectations for a seamless experience.

ID Plus secures the most secure with multi-factor authentication (MFA), single sign-on (SSO), directory, automated identity intelligence, and other critical features in one managed solution that helps organizations move toward Zero Trust, detect threats, ensure compliance, and empower users:

## A unified solution for complex challenges

ID Plus is an extensible platform that supports diverse open standards and integrations. It's the only solution on the market that supports cloud, hybrid, and on-premises environments, brings AI and machine learning to the forefront of threat detection, provides secure on-premises failover, and offers a user-centric experience that drives adoption and satisfaction.

## The strongest security for the worst threats

ID Plus leverages decades of experience, Secure by Design principles, and global insights to prevent risks and detect threats across all environments.

## Secure passwordless—now

Not all passwordless authentication solutions are created equal: RSA provides a range of secure passwordless capabilities that can help organizations mature from MFA to synched passkeys to device-bound passkeys, or use the FIDO2-certified DS100 security key to make authentication secure and convenient.

## Every user, everywhere

Your hybrid and remote workforce needs secure, reliable access to all systems and applications anywhere and anytime. ID Plus delivers this with an all-encompassing range of authentication methods that respond to every user's context, environment, and risk profile.

## Get ID Plus in the Cloud

We make it easy to extend your on-premises deployment with a simple four-step process that will bring your ID Plus to the cloud. You've already paid for this capability—make sure to turn it on! **Contact RSA** for more information on how to use your existing license to get ID Plus across environments and realize even more value from RSA.
