

MODERN MFA FOR CISCO ADAPTIVE SECURITY APPLIANCE (ASA)/ANYCONNECT VPN

Changing workforce dynamics have clear implications for remote access: Access must be secure, and security controls for remote access must also be convenient for end users. RSA SecurID® Access enables businesses to empower their employees, partners and contractors to do more without compromising security or convenience.

With RSA SecurID Access, you'll get a solution that:

- Is easy to deploy and manage.
- Provides identity assurance by confirming users are who they say they are.
- Gives users choice over how they authenticate—from push to approve, biometrics, one-time password, or traditional hardware and software tokens.
- Doesn't stand in the way of users' productivity.

ONE AUTHENTICATION SOLUTION GROUND TO CLOUD

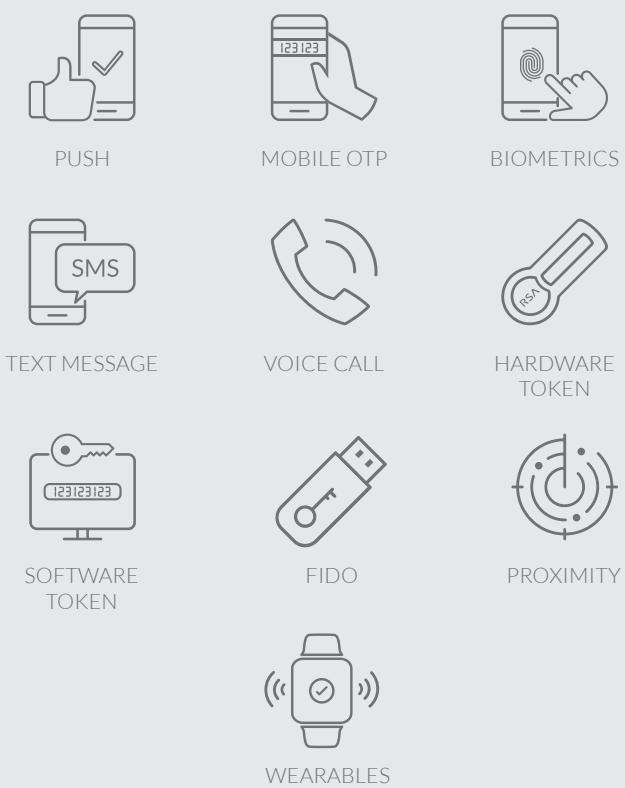

In addition to providing secure access to Cisco VPN, RSA SecurID Access can support your cloud, SaaS and on-premises resources. With RSA SecurID Access, the most widely used authentication solution on the planet, there's no need to deploy any other authentication platform: RSA SecurID Access is built to support all of your users and all of your use cases.

CONFIDENCE IS KEY

Make access decisions smarter. RSA uniquely provides identity assurance: It confirms users are who they say they are by considering the sensitivity of the resources they're trying to access and the level of risk associated with the user's access attempts. For example, if an access attempt seems suspicious based on behavioral indicators, it may trigger step-up authentication for the VPN. But if the access attempt follows a user's typical patterns, RSA SecurID Access can provide seamless access in accordance with an organization's policies.

AUTHENTICATION OPTION WITH RSA SECURID ACCESS

GETTING STARTED

RSA SecurID Access supports multiple Cisco VPN options:

Cisco ASA AnyConnect VPN: RADIUS & UDP Agent	Cisco ASA SSL VPN: RADIUS, SAML & UDP Agent
<ul style="list-style-type: none"> • All authentication types (RADIUS) 	<ul style="list-style-type: none"> • All authentication types
	<ul style="list-style-type: none"> • Risk and behavioral analytics
