

Why Upgrade to RSA Authentication Manager 8.7 SP2

The latest software update from RSA, RSA Authentication Manager 8.7 SP2, provides critical updates that enhance organizations' security, improve performance, and create better user experiences.

Learn more about the new updates from RSA and see how you can get the latest improvements:

Enhanced Security*

- Ensure you have the latest protection to reduce the risk of breaches with security patches that address the newest vulnerabilities.
- Be confident in knowing you are fully compliant with current industry standards through the latest RSA security updates, including advanced MFA options.

**Note: 8.5 End of Support (EOS) July 2023; 8.6 EOS August 2024*

Performance and Efficiency Improvements

- Increase productivity with faster authentication times and more efficient processing.
- Ensure more efficient operations by allocating system resources more effectively.
- Improve business agility and scalability with seamless cloud integration with major service providers.

UX Enhancements

- Create higher user satisfaction with enhanced, customizable, and easier-to-use dashboards.
- Accelerate and improve decision making with advanced reporting tools that provide more detailed actionable insights, such as unusual login activity or suspect behavior.
